06520. *Quasi-isometries of arithmetic groups over function fields*. Preliminary report.

I'll talk about determining the quasi-isometry groups of certain function-field-arithmetic groups including  $\mathbf{SL}_n(\mathbb{F}_q[t])$  where  $n \geq 3$  and  $\mathbb{F}_q[t]$  is a ring of polynomials over a finite field  $\mathbb{F}_q$ . (Received February 20, 2006)
