1021-03-123   **Gerald E sacks***, dept of mathematics, harvard university, one oxford street, cambridge, MA 02138. *Two approaches to Vaught's Conjecture.* Preliminary report.

Two possible approaches to Vaught's Conjecture are sketched. Both stem from absoluteness considerations. One applies morasses and the other uses forcing. Both run into combinatoric problems related to amalgamation of types. (Received August 31, 2006)
