Let k be an algebraically closed field of characteristic zero, C a connected smooth projective curve defined over k . Let X, Y be integral projective schemes over C and $g : X \rightarrow Y$ a morphism defined over C such that $g^\# : \mathcal{O}_Y \rightarrow g_*\mathcal{O}_X$ is an isomorphism. If $X \rightarrow C$ is a trivial family, then the generic fiber of the family $Y \rightarrow C$ is isotrivial. (Received September 22, 2011)
