1093-51-304   **Ian Biringer*** (`ianbiringer@gmail.com`) and **Cyril Lecuire**. *Iterations in Schottky space.*

If H is a handlebody, then convex-cocompact hyperbolic metrics on H are parametrized by the Teichmuller space of the boundary S of H. We describe the geometric limits of sequences of metrics parametrized by an iteration $f^i(X)$, where f is a homeomorphism of S. This gives a compressible version of examples due to Kerckhoff-Thurston, McMullen and Brock. (Received August 19, 2013)
