Mathematics of Computation

This journal is devoted to research articles of the highest quality in computational mathematics. Areas covered include numerical analysis, computational discrete mathematics, including number theory, algebra and combinatorics, and related fields such as stochastic numerical methods. Articles must be of significant computational interest and contain original and substantial mathematical analysis or development of computational methodology. Reviews of books in areas related to computational mathematics are also included.

Submission information. See **Information for Authors** at the end of this issue.

Publisher Item Identifier. The Publisher Item Identifier (PII) appears at the top of the first page of each article published in this journal. This alphanumeric string of characters uniquely identifies each article and can be used for future cataloging, searching, and electronic retrieval.

Postings to the AMS website. Articles are posted to the AMS website individually after proof is returned from authors and before appearing in an issue.

Subscription information. *Mathematics of Computation* is published quarterly. Beginning in January 1996 *Mathematics of Computation* is accessible from `www.ams.org/journals/`. Subscription prices for Volume 78 (2009) are as follows: for paper delivery, $530 list, $424 institutional member, $477 corporate member, $345 member of CBMS organizations; $318 individual member; for electronic delivery, $477 list, $382 institutional member, $429 corporate member, $310 member of CBMS organizations, $286 individual member. Upon request, subscribers to paper delivery of this journal are also entitled to receive electronic delivery. If ordering the paper version, add $28 for surface delivery outside the United States and India; $41 to India. Expedited delivery to destinations in North America is $30; elsewhere $77. For paper delivery a late charge of 10% of the subscription price will be imposed upon orders received from nonmembers after January 1 of the subscription year.

Back number information. For back issues see the `www.ams.org/bookstore`.

Subscriptions and orders should be addressed to the American Mathematical Society, P.O. Box 845904, Boston, MA 02284-5904 USA. *All orders must be accompanied by payment.* Other correspondence should be addressed to 201 Charles Street, Providence, RI 02904-2294 USA.

Copying and reprinting. Material in this journal may be reproduced by any means for educational and scientific purposes without fee or permission with the exception of reproduction by services that collect fees for delivery of documents and provided that the customary acknowledgment of the source is given. This consent does not extend to other kinds of copying for general distribution, for advertising or promotional purposes, or for resale. Requests for permission for commercial use of material should be addressed to the Acquisitions Department, American Mathematical Society, 201 Charles Street, Providence, RI 02904-2294 USA. Requests can also be made by e-mail to `reprint-permission@ams.org`.

Excluded from these provisions is material in articles for which the author holds copyright. In such cases, requests for permission to use or reprint should be addressed directly to the author(s). (Copyright ownership is indicated in the notice in the lower right-hand corner of the first page of each article.)

Mathematics of Computation (ISSN 0025-5718) is published quarterly by the American Mathematical Society at 201 Charles Street, Providence, RI 02904-2294 USA. Periodicals postage is paid at Providence, Rhode Island. Postmaster: Send address changes to Mathematics of Computation, American Mathematical Society, 201 Charles Street, Providence, RI 02904-2294 USA.

MATHEMATICS OF COMPUTATION

CONTENTS

Vol. 78, No. 267 **July 2009**

Alexander Weiss and Barbara I. Wohlmuth, A posteriori error estimator and error control for contact problems 1237

Sören Bartels, Christian Lubich, and Andreas Prohl, Convergent discretization of heat and wave map flows to spheres using approximate discrete Lagrange multipliers 1269

Christoph Schwab and Rob Stevenson, Space-time adaptive wavelet methods for parabolic evolution problems 1293

Ian H. Sloan and Holger Wendland, Inf-sup condition for spherical polynomials and radial basis functions on spheres 1319

T. Gallouët, R. Herbin, and J.-C. Latché, A convergent finite element-finite volume scheme for the compressible Stokes problem. Part I: The isothermal case 1333

Mika Juntunen and Rolf Stenberg, Nitsche's method for general boundary conditions 1353

Seungil Kim and Joseph E. Pasciak, The computation of resonances in open systems using a perfectly matched layer 1375

Yiorgos–Sokratis Smyrlis, Applicability and applications of the method of fundamental solutions 1399

Victor D. Didenko and Bernd Silbermann, Computational approach to solvability of refinement equations 1435

Erwan Faou, Analysis of splitting methods for reaction-diffusion problems using stochastic calculus 1467

Eskil Hansen and Alexander Ostermann, Exponential splitting for unbounded operators 1485

David I. Ketcheson, Computation of optimal monotonicity preserving general linear methods 1497

Jian-Feng Cai, Stanley Osher, and Zuowei Shen, Linearized Bregman iterations for compressed sensing 1515

Say Song Goh, Tim N. T. Goodman, and S. L. Lee, Hybrid spline frames 1537

Ken'ichiro Tanaka, Masaaki Sugihara, and Kazuo Murota, Function classes for successful DE-Sinc approximations 1553

Kwong-Ip Liu, Josef Dick, and Fred J. Hickernell, A multivariate fast discrete Walsh transform with an application to function interpolation 1573

Avram Sidi, Variable transformations and Gauss–Legendre quadrature for integrals with endpoint singularities 1593

J. A. Ezquerro and M. A. Hernández, An improvement of the region of accessibility of Chebyshev's method from Newton's method 1613

Sheehan Olver, On the convergence rate of a modified Fourier series 1629

Dmitrii Kouznetsov, Solution of $F(z+1) = \exp\big(F(z)\big)$ in complex z-plane 1647

Gui-Hua Lin, Combined Monte Carlo sampling and penalty method for stochastic nonlinear complementarity problems 1671

O. N. Karpenkov, Constructing multidimensional periodic continued fractions in the sense of Klein 1687

Mathieu Dutour Sikirić, Achill Schürmann, and Frank Vallentin, Complexity and algorithms for computing Voronoi cells of lattices 1713
Géza Kós, Péter Ligeti, and Péter Sziklai, Reconstruction of matrices from submatrices 1733
Anton Leykin and Frank Sottile, Galois groups of Schubert problems via homotopy computation 1749
J. Miret, R. Moreno, A. Rio, and M. Valls, Computing the ℓ-power torsion of an elliptic curve over a finite field 1767
Masaaki Harada, Akihiro Munemasa, and Boris Venkov, Classification of ternary extremal self-dual codes of length 28 1787
Takashi Fukuda and Keiichi Komatsu, On the Iwasawa λ-invariant of the cyclotomic $\mathbb{Z}_2$-extension of $\mathbb{Q}(\sqrt{p})$ 1797
Andreas Enge, Computing modular polynomials in quasi-linear time 1809
John Cullinan, A computational approach to the 2-torsion structure of abelian threefolds 1825
Artūras Dubickas and Michael J. Mossinghoff, Lower bounds for Z-numbers 1837
Ke-Jian Wu and Zhi-Wei Sun, Covers of the integers with odd moduli and their applications to the forms $x^m - 2^n$ and $x^2 - F_{3n}/2$ 1853
Reviews and Descriptions of Tables and Books 1867
Lars Eldén **3**

Editorial Information

Information on the backlog for this journal can be found on the AMS website starting from `http://www.ams.org/mcom`.

In an effort to make articles available as quickly as possible, articles are posted to the AMS website individually after proof is returned from authors and before appearing in an issue.

A Consent to Publish and Copyright Agreement is required before a paper will be published in this journal. After a paper is accepted for publication, the Providence office will send out a Consent to Publish and Copyright Agreement to all authors of the paper. By submitting a paper to this journal, authors certify that the results have not been submitted to nor are they under consideration for publication by another journal, conference proceedings, or similar publication.

Information for Authors

Initial submission. The AMS uses Centralized Manuscript Processing for initial submission. Authors should submit a PDF file using the Initial Manuscript Submission form found at `www.ams.org/peer-review-submission`, or send one copy of the manuscript to the following address: Centralized Manuscript Processing, MATHEMATICS OF COMPUTATION, 201 Charles Street, Providence, RI 02904-2294 USA. If a paper copy is being forwarded to the AMS, indicate that it is for *Mathematics of Computation* and include the name of the corresponding author and contact information, such as an email address or mailing address. The author may suggest an appropriate editor for his or her paper.

The first page must consist of a *descriptive title*, followed by an *abstract* that summarizes the article in language suitable for workers in the general field (algebra, analysis, etc.). The *descriptive title* should be short, but informative; useless or vague phrases such as "some remarks about" or "concerning" should be avoided. The *abstract* must be brief, reasonably self-contained, and not exceed 300 words. Included with the footnotes to the paper should be the 2000 *Mathematics Subject Classification* representing the primary and secondary subjects of the article. The classifications are accessible from `www.ams.org/msc/`. The list of classifications is also available in print starting with the 1999 annual index of *Mathematical Reviews*. The Mathematics Subject Classification footnote may be followed by a list of *key words and phrases* describing the subject matter of the article and taken from it. Journal abbreviations used in bibliographies are listed in the latest *Mathematical Reviews* annual index. The series abbreviations are also accessible from `www.ams.org/msnhtml/serials.pdf`. To help in preparing and verifying references, the AMS offers MR Lookup, a Reference Tool for Linking, at `www.ams.org/mrlookup/`.

Electronically prepared manuscripts. For the final submission of accepted papers, the AMS encourages use of electronically prepared manuscripts, with a strong preference for $\mathcal{AMS}$-LaTeX. To this end, the Society has prepared $\mathcal{AMS}$-LaTeX author packages for each AMS publication. Author packages include instructions for preparing electronic manuscripts, samples, and a style file that generates the particular design specifications of that publication series. Articles properly prepared using the $\mathcal{AMS}$-LaTeX style file and the \label and \ref commands automatically enable extensive intra-document linking to the bibliography and other elements of the article for searching electronically on the Web. Because linking must often be added manually to electronically prepared manuscripts in other forms of TeX, using $\mathcal{AMS}$-LaTeX also reduces the amount of technical intervention once the files are received by the AMS. This results in fewer errors in processing and saves the author proofreading time. $\mathcal{AMS}$-LaTeX papers also move more efficiently through the production stream, helping to minimize publishing costs.

$\mathcal{AMS}$-LaTeX is the highly preferred format of TeX, but author packages are also available in $\mathcal{AMS}$-TeX. Those authors who make use of these style files from the beginning of the writing process will further reduce their own efforts. Manuscripts prepared electronically in LaTeX or plain TeX are normally not acceptable due to the high amount of technical time required to insure that the file will run properly through the AMS in-house production

system. LaTeX users will find that $\mathcal{AMS}$-LaTeX is the same as LaTeX with additional commands to simplify the typesetting of mathematics, and users of plain TeX should have the foundation for learning $\mathcal{AMS}$-LaTeX.

Authors may retrieve an author package for *Mathematics of Computation* from `www.ams.org/mcom/mcomauthorpac.html` or via FTP to `ftp.ams.org` (login as `anonymous`, enter username as password, and type `cd pub/author-info`). The *AMS Author Handbook* and the *Instruction Manual* are available in PDF format from the author package link. The author package can also be obtained free of charge by sending email to `tech-support@ams.org` (Internet) or from the Publication Division, American Mathematical Society, 201 Charles Street, Providence, RI 02904-2294 USA. When requesting an author package, please specify $\mathcal{AMS}$-LaTeX or $\mathcal{AMS}$-TeX and the publication in which your paper will appear. Please be sure to include your complete email address.

After acceptance. The final version of the electronic manuscript should be sent to the Providence office immediately after the paper has been accepted for publication. The author should also send the final version of the paper to the Managing Editor, who will forward a copy to the Providence office. Accepted electronically prepared manuscripts can be submitted via the web at `www.ams.org/submit-book-journal/`, sent via email to `pub-submit@ams.org` (Internet), or sent on diskette to the Electronic Prepress Department, American Mathematical Society, 201 Charles Street, Providence, RI 02904-2294 USA. When sending a manuscript electronically via email or diskette, please be sure to include a message indicating in which publication the paper has been accepted. No corrections will be accepted electronically. Authors must mark their changes on their proof copies and return them to the Providence office. Complete instructions on how to send files are included in the author package.

Electronic graphics. Comprehensive instructions on preparing graphics are available starting from `www.ams.org/authors/journals.html`. A few of the major requirements are given here.

Submit files for graphics as EPS (Encapsulated PostScript) files. This includes graphics originated via a graphics application as well as scanned photographs or other computer-generated images. If this is not possible, TIFF files are acceptable as long as they can be opened in Adobe Photoshop or Illustrator. No matter what method was used to produce the graphic, it is necessary to provide a paper copy to the AMS.

Authors using graphics packages for the creation of electronic art should also avoid the use of any lines thinner than 0.5 points in width. Many graphics packages allow the user to specify a "hairline" for a very thin line. Hairlines often look acceptable when proofed on a typical laser printer. However, when produced on a high-resolution laser imagesetter, hairlines become nearly invisible and will be lost entirely in the final printing process.

Screens should be set to values between 15% and 85%. Screens which fall outside of this range are too light or too dark to print correctly. Variations of screens within a graphic should be no less than 10%.

AMS policy on making changes to articles after posting. Articles are posted to the AMS website individually after proof is returned from authors and before appearing in an issue. To preserve the integrity of electronically published articles, once an article is individually posted to the AMS website but not yet in an issue, changes cannot be made in place in the paper. However, an "Added after posting" section may be added to the paper right before the References when there is a critical error in the content of the paper. The "Added after posting" section gives the author an opportunity to correct this type of critical error before the article is put into an issue for printing and before it is then reposted with the issue. The "Added after posting" section remains a permanent part of the paper. The AMS does not keep author-related information, such as affiliation, current address, and email address, up to date after a paper is initially posted.

Once the article is assigned to an issue, even if the issue has not yet been posted to the AMS website, corrections may be made to the paper by submitting a traditional errata

article. The errata article will appear in a future print issue and will link back and forth on the web to the original article online.

Secure manuscript tracking on the Web. Authors can track their manuscripts through the AMS journal production process using the personal AMS ID and Article ID printed in the upper right-hand corner of the Consent to Publish form sent to each author who publishes in AMS journals. Access to the tracking system is available from `www.ams.org/mstrack/`. An explanation of each production step is provided on the web through links from the manuscript tracking screen. Questions can be sent to `mcom-query@ams.org`.

TEX files available upon request. TEX files are available upon request for authors by sending email to `file-request@ams.org` or by contacting the Electronic Prepress Department, American Mathematical Society, 201 Charles Street, Providence, RI 02904-2294 USA. The request should include the title of the paper, the name(s) of the author(s), the name of the publication in which the paper has or will appear, and the volume and issue numbers if known. The TEX file will be sent to the author making the request after the article goes to the printer. If the requestor can receive Internet email, please include the email address to which the file should be sent. Otherwise please indicate a diskette format and postal address to which a disk should be mailed. **Note:** Because TEX production at the AMS sometimes requires extra fonts and macros that are not yet publicly available, TEX files cannot be guaranteed to run through the author's version of TEX without errors. The AMS regrets that it cannot provide support to eliminate such errors in the author's TEX environment.

Inquiries. Any inquiries concerning a paper that has been accepted for publication that cannot be answered via the manuscript tracking system mentioned above should be sent to `mcom-query@ams.org` or directly to the Electronic Prepress Department, American Mathematical Society, 201 Charles Street, Providence, RI 02904-2294 USA.
