# Report on the 2016-2017 New Doctorate Recipients 

## Amanda L. Golbeck, Thomas H. Barr, and Colleen A. Rose

This report presents a statistical profile of recipients of doctoral degrees awarded by departments in the mathematical sciences at universities in the United States during the period July 1, 2016 through June 30, 2017. Information in this report was provided by 299 of the 321 doctoral-granting departments surveyed, with additional information provided by the individual new doctoral recipients.

The Report on the 2016-2017 Employment Experiences of New Doctoral Recipients immediately following this report provides an analysis of the fall 2017 employment plans of the 635 PhD recipients who responded to this survey, as well as a summary of their demographic characteristics.

Detailed information, including tables not appearing in this report, is available on the AMS website at www. ams .org/annual-survey.

## Doctorates Awarded

In mathematical sciences 1,957 PhDs were awarded by 299 doctorate-granting departments. Of these, 16 departments awarded no doctorate.

The highest percentage, 31\% (615), of the new PhDs had a dissertation in statistics/biostatistics, followed by algebra/ number theory with $14 \%$ (280) and applied mathematics with $14 \%$ (271).

Comparing PhDs awarded in 2016-17 to 2015-16 the number of PhDs awarded:

- Increased about $2 \%$ from 1,921 to 1,957. In the 280 departments that responded both this year and last year the number of PhDs awarded decreased from 1,921 to 1,826.
- Increased in all groups except Math Public Large, Math Private Large, and Math Private Small.
- Increased 21\% in Statistics, 14\% in both Math Public Medium and Applied Math, 4\% in Math Public Small, and $2 \%$ in Biostatistics.
- Decreased $15 \%$ in Math Public Large, and $11 \%$ in both Math Private Large and Math Private Small.

Comparing PhDs awarded in 2016-17 with those awarded in 2006-07:

- PhDs awarded increased by $47 \%$.
- Degrees awarded by Doctoral Math and by Statistics/ Biostatistics combined increased by $46 \%$ and $49 \%$, respectively.

Figure A.1: Number and Percentage of Degrees Awarded by Department Grouping* Total Degrees Awarded: 1,957

## Math Public Large, 363, 19\%

Math Public Medium, 353, 18\%
Math Public Small, 252, 13\%

Biostatistics, 180, 9\%
*See page 1157 for a description of the department groupings.

Figure A.2: New PhDs Awarded by Group

## Employment

The employment status as of late 2017 was known for 1,671 of the 1,957 doctoral recipients. Figure E. 1 gives a percentage breakdown by employment locale and seeking status. Figure E. 2 shows the overall percentages of these PhDs reporting employment in various job sectors, and Figure E. 3 provides a breakdown of the same information by citizenship. Most of these distributions are close to the ones for 2015-16.

Of the US Citizens whose employment status is known, $89 \%$ (762) are employed in the US, and of these:

- 29\% are employed in PhD-granting departments.
- 39\% are employed in all other academic categories.
- 32\% are employed in government, business and industry.

Figure E.1: Employment Status

[^0]About 33\% of the 2016-17 PhDs were in postdoc positions, which marks a decrease of about 8 percentage points from 2015-16. Most were in doctorate-granting departments, and their distribution is shown in Figure E.4. The counts of postdocs in various job sectors are shown in Figure E.5, broken down by citizenship. Of the PhDs in US academic jobs, $47 \%$ are postdocs.

Figure E. 6 tracks the overall and women's unemployment of new PhDs over a ten-year period. These rates have tended to parallel each other, though in all but two of these years, the unemployment rate has been slightly lower for women. The highest unemployment rate in 2016-17 was approximately $8 \%$ in the Math Public Medium group, and the lowest was about $1 \%$ in the Biostatistics group.

Figure E.2: US Employed by
Type of Employer ( $\mathrm{n}=1,406$ )

* Includes all Math Public, Math Private, and Applied Math departments.
** Other Academic consists of departments outside the mathematical sciences including numerous medical-related units.

Figure E.3: Employment in the US by Type of Employer and Citizenship ( $\mathrm{n}=1,406$ )
$\square$ US Citizen Non-US Citizen

Figure E.4: PhDs Employed in Postdocs by Degree-Granting Department Group ( $\mathrm{n}=1,957$ )

*Includes all Math Public, Math Private, and Applied Math departments.
Figure E.5: New PhDs Employment by Citizenship,Type of Position, andType of Employer ( $\mathrm{n}=1,588$ )

* Includes all Math Public, Math Private, and Applied Math departments.

Figure E.6: Percentage of New Doctoral Recipients Unemployed 2008-17*

## Demographics

Gender and citizenship were known for all 1,957 new PhDs reported for 2016-17. Figure D. 1 gives a breakdown by departmental grouping of the recipients' gender, and Figure D. 2 provides the same categorical breakdown by citizenship. Overall, $49 \%$ (957) of recipients were US citizens, $29 \%$ (577) were women, and $8 \%$ (81) were members of underrepresented minority groups. Figure D. 3 shows the gender breakdown of the US citizens, and Figure D. 4 shows the overall size of the PhD cohort and citizenship breakdown for 2016-17 and the preceding five years.

Here are a few other features of the 2016-17 data:

- $54 \%$ of the PhDs awarded by Math Public Large and Medium groups were to US citizens; 34\% of the PhDs awarded by the Statistics group were to US citizens.

Figure E.7: Percentage of Employed New PhDs byType of Employer

* Includes other academic departments and research institutes/other non-profits.

Figure D.2: Citizenship of Doctoral Recipients by Degree-Granting Grouping ( $n=1,957$ ) ■US Citizens $\quad$ Non-US Citizens

- Except for departments in Math Private Large, Applied Math, and Statistics, more PhDs were awarded to US citizens.
- $50 \%$ of those identifying as men, $46 \%$ of those identifying as women, and $100 \%$ of those identifying as of neither of these genders were US citizens.
- Among the US citizens earning PhDs, 4 were American Indian or Alaska Native, 113 were Asian, 30 were Black or African American, 33 were Hispanic or Latino, 4 were Native Hawaiian or Other Pacific Islander, 720 were White, and 53 were of unknown race/ethnicity.
- Math Public Large departments awarded 15 PhDs to US citizen minorities, and the Large Private group awarded 2; these are, respectively, the largest and smallest production rates. Departments in the other groups account for the remaining minority PhDs.

Figure D.1: Gender of Doctoral Recipients by Degree-Granting Grouping ( $\mathrm{n}=1,957$ ) - Men Wómen Neither

Figure D.3: Gender of US Citizen Doctoral Recipients by Degree-Granting Grouping ( $\mathrm{n}=957$ ) ■ Men $\quad$ Women $■$ Neither

Figure D.4: Citizenship of New PhD Recipients, 2011-17 $\square$ US Citizens $\quad$ Non-US Citizens

Figure F.1:Women as a Percentage of Doctoral Recipients Produced by and Hired by Department Grouping

by and Hired by Department Groupings

|  | Women |  |  |
| :--- | :---: | :---: | :---: |
| Department Grouping | Produced | Total <br> Hired | \# Hired <br> among <br> women <br> produced |
| Math Public Large | 90 | 16 | 2 |
| Math Public Medium | 89 | 22 | 7 |
| Math Public Small | 76 | 9 | 7 |
| Math Private Large | 43 | 14 | 0 |
| Math Private Small | 26 | 9 | 1 |
| Applied Math | 38 | 5 | 1 |
| Statistics | 19 | 10 | 4 |
| Biostatistics | 96 | 13 | 9 |
| Total | 77 | 98 | 31 |

Figure F.2:Women as a Percentage of US Citizen Doctoral Recipients and Graduate Students

## Women Doctoral Recipients

Overall, 29\% of doctorate recipients were women, a fraction that has fallen by roughly a percentage point a year for the third year in a row. Of the 1,009 PhDs taking academic jobs, $28 \%$ (286) were women, and this continues a parallel decline in that percentage. Figure F. 2 focuses on the percentage, over time, of US-citizen PhDs and graduate students who are women. Among US-citizen PhDs, the fraction in 2016-17 who are women ticked up by a percentage point or two from $26 \%$ in 2014-15 and 2015-16.

Figure F. 1 gives some insight to which groups tend to hire their own women graduates. For example the graph shows that in Math Public Small departments, women constituted $30 \%$ of PhDs produced, $24 \%$ of faculty hired
in this group were women from this group, and overall 9\% of women produced by this group were hired in this group.

The section on Demographics contains some discussion of the status of women earning PhDs in mathematical sciences.

Figure S.3: Citizenship of PhD Recipients from Statistics/Biostatistics Departments ( $\mathrm{n}=531$ )

Figure S.4: Employment Status of PhD Recipients from Statistics/Biostatistics Departments ( $\mathrm{n}=531$ )

Figure S.5: US-Employed PhD Recipients from Statistics/Biostatistics Departments byType of Employer ( $\mathrm{n}=427$ )

* Other Academic consists of departments outside the mathematical sciences including numerous medical-related units.

## PhDsAwarded by Statistics and Biostatistics (Stat/Biostat) Departments

One hundred one Stat/Biostat departments (58 of 59 statistics and 43 of 46 biostatistics) responded to this survey. They produced 531 doctorates, all of whom had dissertations in statistics/biostatistics, $14 \%$ more than in 2015-16. Figures S. 1 through S. 5 give breakdowns of these numbers by gender, citizenship, and employment status.

In addition, departments in the Mathematics groups had 123 PhD recipients with dissertations in statistics, so the overall number of PhDs specializing in statistical sciences for 2016-17 was 615, or 31\% of the total. For the remainder of this section, the counts and percentages stated refer to doctorates awarded by departments in the Statistics groups.

Here are some attributes of the 2016-17 Stat/Biostat PhDs:

- $27 \%$ of all those in mathematical sciences were in the Stat/Biostat group.
- Women accounted for $34 \%$ of Statistics and $53 \%$ of Biostatistics.
- $41 \%$ of the US citizens were women.
- The unemployment rate of $2 \%$ is less than half of the corresponding percentage among Math PhDs.
- 32\% of 2016-17 mathematical and statistical sciences PhDs hired by Stat/Biostat departments were women.

## Departmental Groupings

In this report, Mathematical and Statistical Sciences departments are those in four-year institutions in the US that refer to themselves with a name that incorporates (with a few exceptions) "Mathematics" or "Statistics" in some form. For instance, the term includes, but is not limited to, departments of "Mathematics," "Mathematical Sciences," "Mathematics and Statistics," "Mathematics and Computer Science," "Applied Mathematics," "Statistics," and "Biostatistics." Also, Mathematics (Math) refers to departments that (with exceptions) have "mathematics" in the name; Stat/Biostat refers to departments that incorporate (again, with exceptions) "statistics" or "biostatistics" in the name but do not use "mathematics."

Listings of the actual departments that comprise these groups are available on the AMS website at www. ams.org /annual-survey/groupings.

| A department is in <br> Group... | ...when its subject area, <br> highest degree offered, and <br> PhD production rate $\boldsymbol{p}$ |
| :--- | :--- |
| Math Public Large | Math PhD, $7.0 \leq p$ |
| Math Public Medium | Math PhD, $3.9 \leq p<7.0$ |
| Math Public Small | Math PhD, $p<3.9$ |
| Math Private Large | Math PhD, 3.9 $\leq p$ |
| Math Private Small | Math PhD, $p<3.9$ |
| Applied Math | Applied mathematics, PhD |
| Statistics | Statistics, PhD |
| Biostatistics | Biostatistics, PhD |
| Masters | Math, masters |
| Bachelors | Math, bachelors |
| Doctoral Math |  <br> Applied Math |
| Stat/Biostat or Stats | Statistics \& Biostatistics |
| Math |  <br> Biostatistics |

## Department Response Rates by Grouping

| Group | Received |
| :--- | :--- |
| Math Public Large: | 26 of 26 including 0 with no degrees |
| Math Public Medium: 40 of 40 including 0 with no degrees |  |
| Math Public Small: | 67 of 68 including 8 with no degrees |
| Math Private Large: | 23 of 24 including 0 with no degrees |
| Math Private Small: | 28 of 28 including 1 with no degrees |
| Applied Math: | 30 of 30 including 2 with no degrees |
| Statistics: | 58 of 59 including 4 with no degrees |
| Biostatistics: | 33 of 46 including 4 with no degrees |
| Total: | 315 of 321 including 4 with no degrees |

As of press time for this issue of Notices, the following departments had not responded to the survey. Therefore, any PhDs which may have been awarded by these departments are not included in this report.

## Mathematics Departments

California Institute of Technology
University of Puerto Rico, Rio Piedras

## Statistics Departments

University of Pennsylvania

## Biostatistics Departments

Saint Louis University College for Public Health \& Social Justice University of Illinois at Chicago
University of Texas-School of Public Health

## Doctoral Degrees Conferred 2016-2017

## ANNUAL SURVEY

## Acknowledgments

The Annual Survey attempts to provide an accurate appraisal and analysis of various aspects of the academic mathematical sciences scene for the use and benefit of the community and for filling the information needs of the supporting organizations. Every year, college and university departments in the United States are invited to respond, and the Annual Survey relies heavily on the conscientious efforts of the dedicated staff members of these departments. On behalf of the Joint Data Committee and the Annual Survey Staff, we thank the many secretarial and administrative staff in the departments for their cooperation and assistance in responding to the survey questionnaires.

The Annual Survey is co-sponsored by the American Mathematical Society (AMS), American Statistical Association (ASA), Institute for Mathematical Statistics (IMS), Mathematical Association of America (MAA), and Society for Industrial and Applied Mathematics (SIAM).

# Report on the 2016-2017 Employment Experiences of the New Doctoral Recipients 

Amanda L. Golbeck, Thomas H. Barr, and Colleen A. Rose

This report focuses on information that comes from the Employment Experiences of New Doctorate Recipients (EENDR) survey of individual PhD recipients regarding their experiences in finding and beginning new jobs. The survey was sent to the 1,419 new PhDs for whom departments provided contact information, and responses were collected during the period July 2017 to October 2018. Six hundred thirty-five (45\%) responded. Some of the gross features of the respondents to the EENDR are similar to those of the overall group on which the New Doctorates report is based. For instance, of the 635, 33\% were women ( $29 \%$ overall), $60 \%$ were US citizens ( $49 \%$ overall), $11 \%$ were employed outside the US ( $9 \%$ overall), and $4 \%$ were members of underrepresented minority groups (8\% overall).

Figure EE. 1 shows a breakdown by sector of EENDR respondents working in permanent jobs in the US in the broad sectors academia, business and industry, and government; Figure EE. 2 gives the same breakdown for
those in temporary jobs. All but $2 \%$ of these jobs are full-time. When combined, the information in these two figures can be compared with that in Figure E. 2 in the New Doctorates report:

| Employment Sector | EENDR Overall <br> \% US Employed <br> $(\mathrm{n}=544)$ | DR Overall <br> \% US Employed <br> $(\mathrm{n}=1,406)$ |
| :--- | :---: | :---: |
| Academia | $72 \%$ | $61 \%$ |
| Government | $7 \%$ | $6 \%$ |
| Business \& Industry | $21 \%$ | $34 \%$ |

This comparison suggests that 2016-2017 EENDR responses are somewhat biased toward those employed in academia, and thus any conclusions about the entire group of new PhDs based on EENDR responses alone should be made with this qualification. Such bias is not unexpected, since the EENDR responses are not the product of a random sample. The similarities here suggest that estimates based on the EENDR data (e.g., median starting salaries) may not

Figure EE.1: EENDR Respondents Reporting Permanent US Employment by Sector ( $\mathrm{n}=268$ )

| Fall 2017 | $51 \%$ | $8 \%$ | $41 \%$ | $92 \%$ | $5 \%$ | $2 \%$ |

be wildly different from the actual values for all of the new PhDs, but the reader should keep these differences in mind.

Table EE. 1 gives a longitudinal comparison of responses to the EENDR questionnaire from 2013 through 2017. Here are a few features to note:

- $49 \%$ of those employed for fall 2017 were in permanent positions.
- The percentage of those in temporary jobs because a permanent one was not available has ranged between $43 \%$ and $52 \%$ in the years 2013 to 2017, and the 2017 value of $49 \%$ is in line with these percentages.
- The percentage of those in temporary jobs who are postdocs has remained consistent over this five-year period, and the 2017 percentage of $76 \%$ is the modal value. Also in 2017, of those in postdocs, $70 \%$ hold that position because a permanent job was not available.
Table EE. 2 compares percentages of PhDs taking employment in various sectors, by job durability. Over the five years shown, the percentages in all of these categories have remained remarkably stable.

Figures EE.5, EE.6, and EE. 7 show breakdowns of employment in the broad sectors of education, government, and business and industry. The following table provides

Figure EE.4:Temporary Positions
by Duration, Gender, and Count ( $\mathrm{n}=325$ )

| Sector | Number of <br> Responses | $\%$ <br> US Citizens | $\%$ <br> Women | $\%$ <br> Temporary | $\%$ <br> Looking |
| :--- | :---: | :---: | :---: | :---: | :---: |
| Education | 425 | $59 \%$ | $32 \%$ | $67 \%$ | $35 \%$ |
| Government | 38 | $73 \%$ | $37 \%$ | $42 \%$ | $10 \%$ |
| Business and <br> Industry | 121 | $58 \%$ | $26 \%$ | $5 \%$ | $12 \%$ |

further insight to these figures by sector, demographics, and job status.

Five hundred eighty-three doctorates provided age information, and Figure EE. 8 provides the distribution. The median age was 30, the youngest PhD was 23, and the oldest 55 . Almost $60 \%$ of these respondents were between the ages of 26 and 30.

Figure EE. 9 gives percentages by employment sector of EENDR respondents who identify themselves as Hispanic. The designation "unknown" indicates the respondent did not provide ethnicity data.

Figure EE.5. Employment by Type of Educational Institution (Educ) ( $\mathrm{n}=425$ )

Figure EE.6. Employment by Type of Government (Gov) ( $\mathrm{n}=38$ )

Figure EE.7. Employment by Type of Business/Industry (BI) ( $\mathrm{n}=121$ )

*Includes Biotechnology (2), Consumer Merchandising (3), Energy (3), and Survey/Market Research (1).

Figure EE.8. Age Distribution of New PhD Respondents ( $\mathrm{n}=583$ )

- Men Women Neither

Nineteen respondents to the EENDR survey were Black or African American, 4 were American Indian or Alaska Native, 3 were Native Hawaiian or Other Pacific Islander, 198 were Asian, 394 were White, and 17 were unknown.

## Starting Salaries of the 2016-2017 Doctorate Recipients

The starting salary figures were compiled from information gathered on the EENDR questionnaires sent to 1,419 individuals using addresses provided by the departments granting the degrees; 635 individuals responded between late October 2017 and June 2018. Responses with insufficient data or from individuals who indicated they had part-time or non-US employment were excluded. Numbers of usable responses for each salary category are reported in the tables on page 1164.

Readers are warned that the data in this report are obtained from a self-selected sample, and inferences from them may not be representative of the full population. Detailed information, including boxplots which traditionally appeared in this report, is available on the AMS website at www.ams.org/annua1-survey/survey-reports.

## Remarks on Starting Salaries

Key to Tables and Graphs. Salaries are those reported for the fall immediately following the survey cycle. Years listed denote the survey cycle in which the doctorate was received-for example, survey cycle July 1, 2016-June 30, 2017 is designated as 2017. Salaries reported as 9-10 months exclude stipends fom summer grants teaching, or the equivalent. M and W are men and women, respectively. Separate figures are not provided when the number of salaries available for analysis in a particular category was five or fewer. All categories of "Teaching/Teaching and Research" and "Research Only" contain those recipients employed at academic institutions only.

Figure EE.9. Ethnicity of New PhD Respondents byType of US Employer ( $\mathrm{n}=33$ )

- \# Hispanic/Latino \#\#nknown

Graphs. The graphs show standard boxplots summarizing salary distribution information for the years 2010 through 2017. Values plotted for 2010 through 2016 are converted to 2017 dollars using the implicit price deflator prepared annually by the Bureau of Economic Analysis, US Department of Commerce [https://www.bea.gov]. The category for each graph is based on a work activity reported in the EENDR. Salaries of postdoctorates are shown separately. They are also included in other academic categories with matching work activities.

For each boxplot the box shows the first quartile (Q1), the median (M), and the third quartile (Q3). Upper whiskers extend from Q3 to the largest data value below Q3+1.5IQR, and lower whiskers from Q1 down to the smallest data value above $\mathrm{Q} 1-1.5 \mathrm{IQR}$. Data points falling between $\mathrm{Q} 3+1.5 \mathrm{IQR}$ and $\mathrm{Q} 3+3 \mathrm{IQR}$ or $\mathrm{Q} 1-1.5 \mathrm{IQR}$ and $\mathrm{Q} 1-3 \mathrm{IQR}$ are designated as outliers and plotted as circles $\left({ }^{\circ}\right)$. Data outside the range Q1-3IQR to Q3+3IQR are designated as extreme outliers and plotted as stars (*).

## Acknowledgments

The Annual Survey attempts to provide an accurate appraisal and analysis of various aspects of the academic mathematical sciences scene for the use and benefit of the community and for filling the information needs of the professional organizations. Every year, college and university departments in the United States are invited to respond. The Annual Survey relies heavily on the conscientious efforts of the dedicated staff members of these departments for the quality of its information. On behalf of the Data Committee and the Annual Survey Staff, we thank the many secretarial and administrative staff members in the mathematical sciences departments for their cooperation and assistance in responding to the survey questionnaires. For this EENDR report, we thank the PhD recipients who responded to the survey. Their participation is vital to our providing accurate and timely information.

The Annual Survey is co-sponsored by the American Mathematical Society (AMS), American Statistical Association (ASA), Institute for Mathematical Statistics (IMS), Mathematical Association of America (MAA), and Society for Industrial and Applied Mathematics (SIAM).

| Unknown (non-US)* | 9 | 6 | 6 | 4 | 2 | 1 | 14 | 10 | 52 |
| Total | 90 | 89 | 76 | 43 | 26 | 38 | 119 | 96 | 577 |

[^0]:    * If the unemployment percentage is adjusted by computing with a denominator that excludes those employed outside the US, then the value rounds to the same whole number percentage, 4\%. Even if, in addition, those whose employment status is unknown are also removed from the denominator, the unemployment rate would be slightly more than $5 \%$.
